Tutorial - 1

Q-1 :	**Write the steps to configure the Python IDE (IDLE/VS Code) to:** • **Change the font style.** • **Change the font size.**
Answer :	**Open IDLE.** **Click Options → Configure IDLE.** **Open the Fonts/Tabs tab.** **Select the Font Style.** **Select the Font Size.** **Click OK to save the changes.**

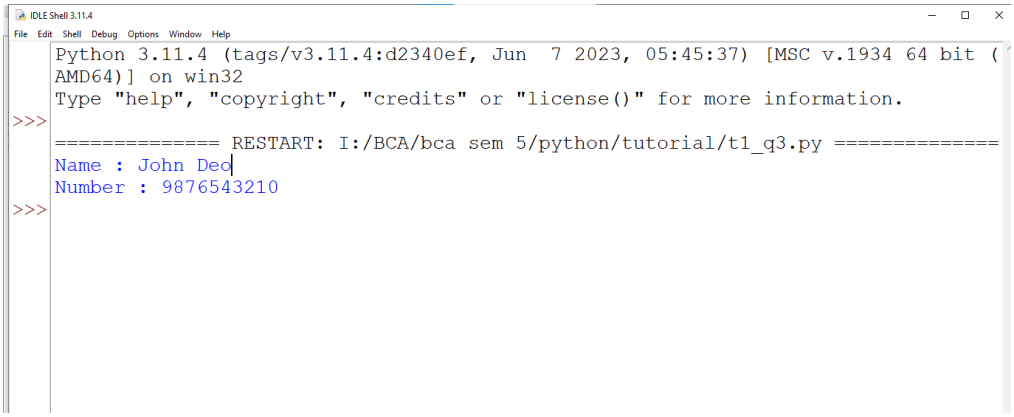

Q-2 :	Declare **five variables** to store different color names. Print all the color names using the `print()` function.
	Example Output:
	`Red`
	`Blue`
	`Green`
	`Yellow`
	`Black`

Code :	**color1 = "Red"** **color2 = "Blue"** **color3 = "Green"** **color4 = "Yellow"** **color5 = "Black"**

	print(color1) **print(color2)** **print(color3)** **print(color4)** **print(color5)**
	

Q-3 :	Write a Python program using variables to store and display your **name** and **mobile number**.
	
	Example Output:
	
	`Name : John Doe`
	
	`Mobile No : 9876543210`

Code :	**name = "John Deo"** **number = "9876543210"** **print("Name : "+name)** **print("Number : "+number)**

Q-4 :

Write a Python program to display your introduction using **variables** and the **formatting function** (`format()` or f-string).

Example Output:

```
My name is John Doe.

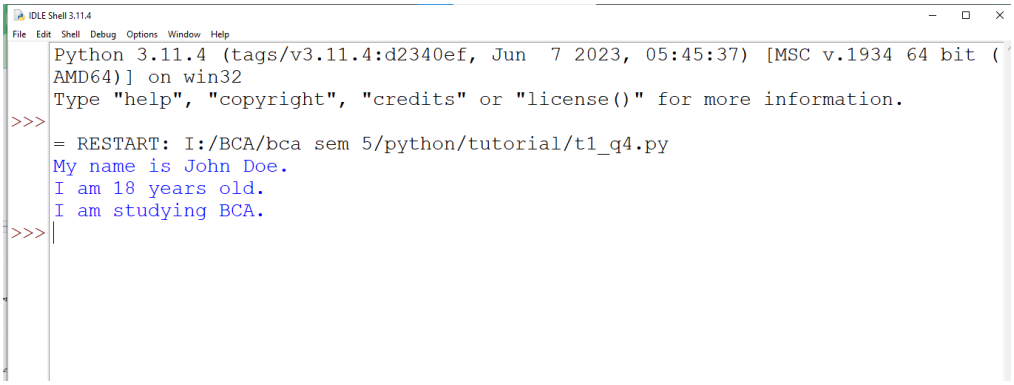

I am 18 years old.

I am studying BCA.
```

Code :

```
name = "John Doe"
age = 18
course = "BCA"

print(f"My name is {name}.")
print(f"I am {age} years old.")
print(f"I am studying {course}.")
```

Q-5 :

Write a Python program to create variables of different data types and display their values along with their data types using the `type()` function.

Example Output:

```
Integer : 25      <class 'int'>

Float   : 75.5    <class 'float'>

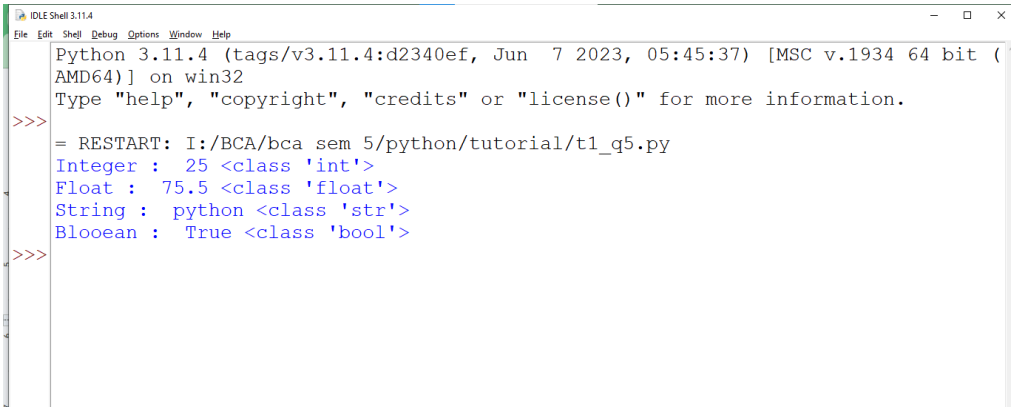

String  : Python  <class 'str'>

Boolean : True    <class 'bool'>
```

Code :

```
int = 25
float = 75.5
str = "python"
bool = True

print ("Integer : ", int, type(int))
print ("Float : ", float, type(float))
print ("String : ", str, type(str))
print ("Blooean : ", bool, type(bool))
```

Q-6 :

Write a Python program to display a student's mark sheet in a properly formatted manner using variables and print statements.

Sample Output:

```
----------------------------------------

              STUDENT MARK SHEET

----------------------------------------

Name         : Rahul Sharma

Roll No.     : 101

Python       : 85

Mathematics: 90

English      : 78

Total        : 253

Percentage   : 84.33%

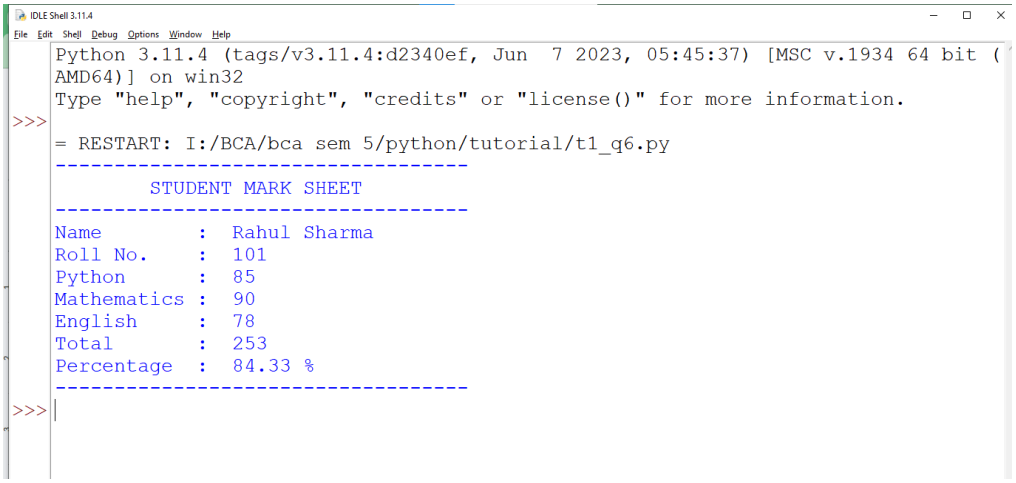

----------------------------------------
```

Code :

```
print ("----------------------------------")
print ("      STUDENT MARK SHEET       ")
print ("----------------------------------")
```

```
name = "Rahul Sharma"
roll = 101
py = 85
math = 90
eng = 78
total = 253
pr = 84.33

print ("Name       : ",name)
print ("Roll No.   : ",roll)
print ("Python     : ",py)
print ("Mathematics : ",math)
print ("English    : ",eng)
print ("Total      : ",total)
print ("Percentage  : ",pr,"%")
print ("-----------------------------------")
```

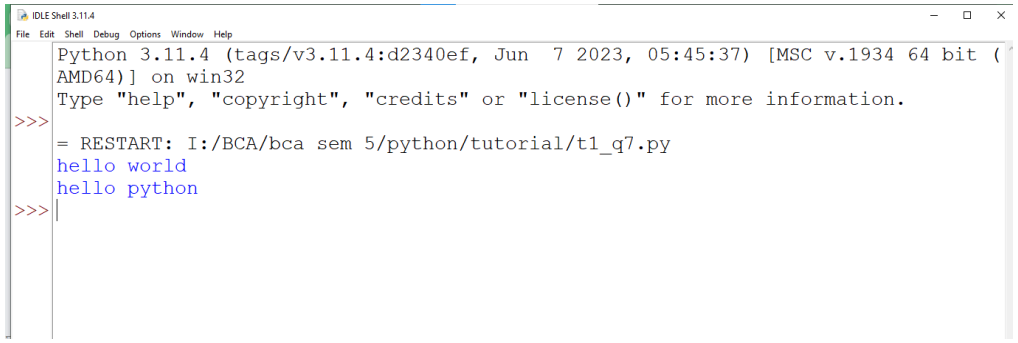

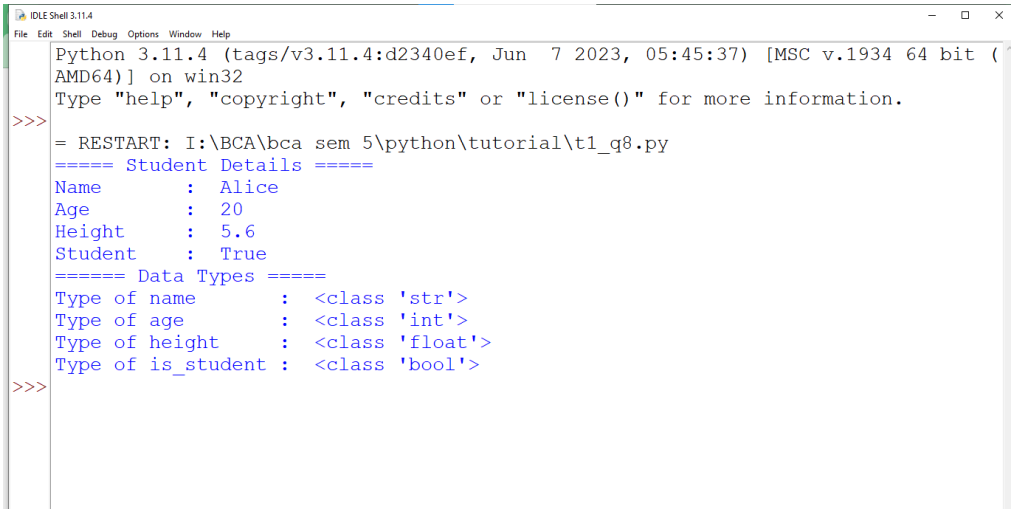

Q-7 : Write a Python program demonstrating the use of **single-line comments** and **multi-line comments**.

Code :

```
# Thisis a Single line Comment for print hello world
print("hello world")

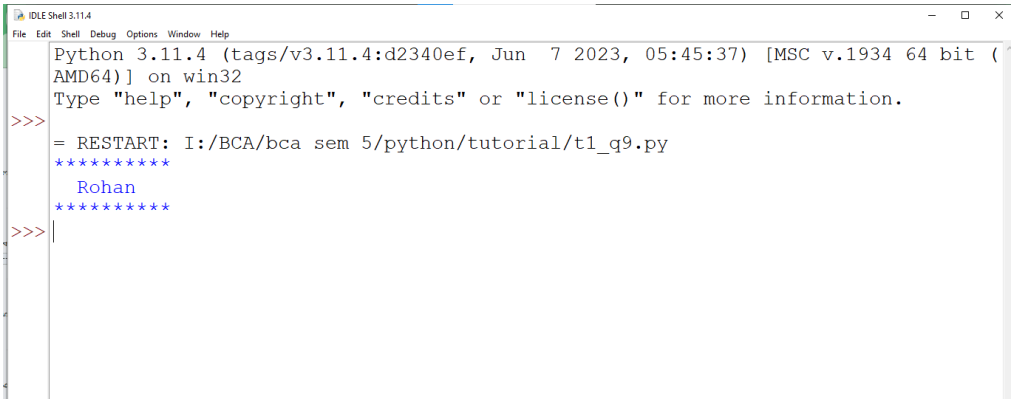

"""
This is a Multiline Comment
```

	for print hello python **"""** **print ("hello python")**
	
Q-8 :	Write a Python program that demonstrates the use of: • Variables • Data Types • String Formatting • `type()` Function Display the output in a well-formatted manner.
Code :	**name = "Alice"** **age = 20** **height = 5.6** **is_student = True** **print("===== Student Details =====")** **print(f"Name : ",name)** **print(f"Age : ",age)** **print(f"Height : ",height)** **print(f"Student : ",is_student)** **print("====== Data Types =====")** **print(f"Type of name : ",type(name))** **print(f"Type of age : ",type(age))** **print(f"Type of height : ",type(height))**

	print(f"Type of is_student : ",type(is_student))
	

Q-9 :	Using only the `print()` function, display the following pattern:
	`**********`
	`NAME`
	`**********`
	Replace **NAME** with your own name.

Code :	**print ("**********")** **print (" Rohan ")** **print ("**********")**

Q-10 :

Using only the `print()` function, display the following invitation card:

```
**************************************************

                INVITATION CARD

**************************************************

          You are Cordially Invited

                   to Attend

              Freshers' Welcome 2026

Date    : 15 August 2026

Time    : 10:00 AM

Venue   : Seminar Hall

        We Look Forward to Your Presence!
```

```
**************************************************
```

```
print("**************************************************")
print("            INVITATION CARD")
print("**************************************************")
print()
print("        You are Cordially Invited")
print("              to Attend")
print()
print("          Freshers' Welcome 2026")
print()
print("Date   : 15 August 2026")
print("Time   : 10:00 AM")
print("Venue  : Seminar Hall")
print()
print("       We Look Forward to Your Presence!")
print()
print("**************************************************")
```
